

## **Stock Broker Client Web Dashboard.**

**Create a Stock broker client web Dashboard that allows the user to do the following**

- 0) Allows a user to login using his/her email
- 1) Subscribe to a Supported Stock via the Stock ticker code eg. GOOG,TSLA etc  
Choose 5 stocks to support eg. ['GOOG','TSLA','AMZN','META','NVDA'].
- 2) Update the stock prices of subscribed stock without refreshing the dashboard
- 3) The app should support at least two users who subscribe to different stocks and the dashboards update asynchronously while both are open.

You don't need to get an actual price for these stocks, you can use a random number generator to keep updating the stock prices every second.
